companies.

Customer Announcement - May 19th 2026

Medistri Achieves GLP Compliance: Strengthening the Value of Our Laboratory Services

Dear Business Partners,

We are pleased to announce that Medistri has been officially enrolled in the Swiss Good Laboratory Practice (GLP) Compliance Monitoring Program, effective 13 May 2026. The decision was issued by the Notification Authority for Chemicals (NAChem) at the Federal Office of Public Health, following inspections conducted by Swissmedic. The official list of GLP-compliant laboratories in Switzerland, published by the Swiss Federal Authorities and now including Medistri as part of the Swiss GLP Compliance Monitoring Program, can be consulted [here](#).

Our GLP scope covers:

- Chemical Characterization: TOC, HCT, EO/ECH/EG, VOC and SVOC
- Biological Testing: Cytotoxicity (ISO 10993-5)
- Microbiological Method Validation: Bioburden, sterility, endotoxin (Endosafe Cartridge), germ identification (VITEK)
- Cleanliness & Residue Testing: Sub-visible particles (Light Obscuration), protein & hemoglobin

Medistri is the only facility on the Swiss GLP register to combine this full range of testing under a single GLP scope. Additional information regarding this milestone and our GLP activities is available in our official announcement blog [here](#).

What This Means for You

GLP compliance ensures that safety study data generated in our laboratory meets the highest internationally accepted standards of quality, integrity, and traceability. Combined with our existing ISO 17025 accreditation, this means you can now consolidate your GLP-compliant safety testing with a single laboratory partner, with data accepted by regulatory authorities worldwide – including the FDA, European notified bodies, Swissmedic, and across all OECD member countries. Concretely, this translates into:

- Enhanced regulatory acceptance of safety data across international markets
- A single partner for the full cleaning validation and biological safety testing chain
- Reduced coordination complexity and faster project timelines
- Full traceability and reproducibility across every stage of the study

Our official GLP Certificate is now also available on [our website](#).

To further present this achievement and the capabilities behind our GLP laboratory infrastructure, we have also released a dedicated video available on [LinkedIn](#), [Instagram](#), [X](#) and [Facebook](#).

This development reflects our continued commitment to investing in quality and capabilities that directly support your operations and regulatory submissions.

To learn more about Medistri's laboratory services and GLP scope, please visit our website [here](#) or contact our dedicated team at lab@medistri.com or by phone at +41 026 676 90 80. As always, our dedicated team is available to assist with any inquiries or upcoming projects.

We thank you for your continued partnership and support.

Sincerely,

Your Medistri Team
